Census Bureau Releases New Educational Attainment Data

FEBRUARY 24, 2022
RELEASE NUMBER CB22-TP5-02

FEB. 24, 2022 — Today, the U.S. Census Bureau released findings from the Educational Attainment in the United States: 2021 table package that use statistics from the Current Population Survey's Annual Social and Economic Supplement to examine the educational attainment of adults age 25 and older by demographic and social characteristics, such as age, sex, race and nativity.

Data Highlights

- In 2021, the highest level of education of the population age 25 and older in the United States was distributed as follows:
 - 8.9% had less than a high school diploma or equivalent.
 - 27.9% had high school graduate as their highest level of school completed.
 - 14.9% had completed some college but not a degree.
 - 10.5% had an associate degree as their highest level of school completed.
 - 23.5% had a bachelor's degree as their highest degree.
 - 14.4% had completed an advanced degree such as a master's degree, professional degree or doctoral degree.

Income, Poverty and Health Insurance and Supplemental Poverty Measure

SEPTEMBER 14, 2021
Annual release of national-level income, poverty and health insurance coverage statistics. The reports will include statistics for calendar year 2020 and compare trends with previous years.

Post-Enumeration Survey (PES) Press Kit

MARCH 2022
The purpose of the Post-Enumeration Survey (PES) is to measure the accuracy of the census by independently surveying a sample of the population. The survey estimates the proportion of people and housing units potentially missed or counted erroneously in the census.
The first results from the PES are planned for release in the first quarter of 2022, with additional results to be released in the summer of 2022.

Webinar

Thursday, March 3, 2022 at 1 p.m. EST
The Census Bureau will conduct a webinar prior to the release of the first set of results from the 2020 Post-Enumeration Survey (PES) along with additional results from the 2020 Demographic Analysis (DA) estimates on March 10. The webinar will explain the purpose, methodologies and types of results that will be made available from the PES and DA.

Women's History Month: March 2022

March 1, 2022

National Women's History Month traces its roots to March 8, 1857, when women from various New York City factories staged a protest over poor working conditions. The first Women's Day celebration in the United States was in 1909, also in New York City. More than seven decades later, Congress in 1981 established National Women's History Week to be commemorated annually the second week of March. In 1987, Congress expanded the week to a month and every year since has passed a resolution (and the president has issued a proclamation) designating March Women's History Month.

As we celebrate Women's History Month 2022, we reflect upon advances women have made over the last decade. Women have increased their earnings, education and fields of occupation, and continue to have longer average life spans than men. Below are some Census Bureau stats highlighting these and other changes over the years. We appreciate the public's cooperation in helping us measure America's people, places and economy.

Did You Know?

[164.8 million](#)

The number of females of all ages in the United States. There were 159.9 million males of all ages.
